Impellers are delivered with the necessary gaskets and/or 'O'rings

All mentioned prices are excl. VAT, FOT Putten Netherlands and are valid until 31-12-2018

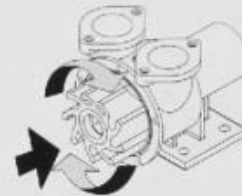

Flexible impellers are the most important part of impeller pumps. JMP improves impeller performance by a special surface coating, which is decreasing wear and tear so the impellers will last a long time. JMP recommends to change the impeller every year. We guarantee that you will be well pleased with JMP flexible impellers.

(CAUTION: We do not recommend using two screwdrivers to remove the impeller as these will damage the surface of the pump body and O-ring sealing surface which will cause leaks. This practice can also cause bodily injury in a confined space.)

How to remove the old impeller:

Using slip joint pliers, remove the impeller by twisting and then pulling in the rotating direction.

How to fit the new impeller:

Lubricate the shaft inside the pump body. After offering the new impeller to the shaft, force the new impeller over the shaft by pushing and twisting in the rotating direction.
